

Node Hierarchy Manager

Application Launch & Runtime Status Verification Report

Runtime Status: **ONLINE / ACTIVE**

Access URL: <http://localhost:5173>

Environment: Development (Vite HMR)

HTTP Verification: 200 OK (HTML Entry Served)

1. Execution & Process Overview

The Node Hierarchy Manager frontend application has been launched in background daemon mode using the Vite development server runtime.

Parameter	Value / Configuration
Application Name	node-hierarchy-manager
Local Server Address	http://localhost:5173
Runtime Engine	Node.js + Vite 4.5.0
Process Command	npm.cmd run dev (vite)
Binding Interface	TCP [::1]:5173 (IPv6 Localhost Loopback)
Hot Module Replacement	Enabled (@react-refresh active)

2. Application Architecture & Configuration

The system architecture comprises a modern React 19 single-page application interfacing with Supabase PostgreSQL backend and external AI APIs:

Layer	Technologies & Role
Frontend Client	React 19.2, TypeScript, React-Markdown, Remark-GFM
Database & Auth	@supabase/supabase-js client connected to Supabase Auth & PostgreSQL schema
Proxy Endpoints	/xai-api -> https://api.x.ai/v1 /api -> Target API Backend
Build & Tooling	Vite Plugin React, TypeScript ESLint, Strict Type Verification

3. Access & Verification Summary

Automated HTTP verification against the local development server returned status **200 OK** with the HTML document and React entry module correctly loaded.

To view and interact with the application:

- Open your web browser and navigate to **http://localhost:5173**
- The Node Hierarchy Manager dashboard will load with live interactive components.
- Hot Module Replacement (HMR) is active; code edits will reflect in real time without manual server restarts.
