

Application Runtime & Process Status Report

System Diagnostic & Port Inspection • Node Hierarchy Manager

Overall Status: STOPPED / NOT RUNNING
Checked Timestamp: 2026-08-31 12:40 BST
Target Application: node-hierarchy-manager (Vite + React 19 + TypeScript)
Primary Target Port: TCP 5173 (Default Vite Dev Server)

1. Executive Summary

A full diagnostic scan was performed across active system processes and network listeners. The application (**node-hierarchy-manager**) is currently **not running**. No Node.js runtime instances (node.exe) or Vite development server processes are active on the host, and all standard application ports are unoccupied.

2. Diagnostic Scan Breakdown

Target / Resource	Expected Port / Target	Detected State	Status
Vite Dev Server	TCP :5173	No active listener	Inactive
Vite Preview Server	TCP :4173	No active listener	Inactive
Backend API Proxy	TCP :5000 / :8080	No active listener	Inactive
Node.js Runtime	node.exe processes	0 running instances	Inactive
Project Dependencies	node_modules/	Installed & ready	Ready

3. How to Launch the Application

To start the local development server or run the production build, execute the following commands in the workspace root:

Mode	Command	Access URL
Development Server Hot reloading & fast refresh	npm run dev	http://localhost:5173
Production Build & Preview Type-check, bundle & test	npm run build npm run preview	http://localhost:4173
Code Linting & Verification ESLint checks	npm run lint	Console Output

4. Summary & Verification

- **Current Status:** Offline / Stopped.
- **Workspace Integrity:** node_modules, dependencies, and environment configurations are in place.
- **Recommended Action:** Run npm run dev in your terminal if you wish to launch the interactive UI.
