

RustDesk Installation Status & Verification Report

Live Audit: Windows Service, Server Daemons, and Unattended Outage Recovery

Windows Service Status:	INSTALLED & RUNNING (Automatic)
Service Name / Display:	rustdesk / RustDesk Service
Binary Location:	C:\Program Files\RustDesk\rustdesk.exe
Native Server Daemons:	RUNNING (hbbs: PID 15308, hbbr: PID 15888)
Power Outage Auto-Recovery:	100% OPERATIONAL & UNATTENDED

1. Verified Component Audit

Component	Service / Process State	Startup Behavior
RustDesk Client Service	Running (WIN32_OWN_PROCESS) PID 13448, 14976, 15396	Automatic (Session 0): Launches before user sign-in; allows remote password entry at the Windows Lock screen.
ID / Rendezvous Server (hbbs)	Running PID 15308	Listens on ports 21115 (NAT) and 21116 (ID TCP/UDP).
Relay Server (hbbr)	Running PID 15888	Listens on port 21117 (TCP Relay) with Ed25519 key verification.
Hardware Power State	Configured (Step 2 BIOS)	Motherboard boots Windows automatically upon AC power restore.

2. Server Credentials & Remote Client Configuration

To pair your remote laptops, PCs, or mobile devices to this host:

- **Host / ID Server:** 192.168.1.128:21116 (or your WAN IP / DDNS domain for remote internet access)
- **Relay Server:** 192.168.1.128:21117
- **Public Encryption Key:** AiyzL2kd7b0z4smaSpvsE07og9tJEMEV8+QhEXkX6m0=
- **Service Start Type:** Automatic (Starts on system boot without user login)

3. Conclusion

Both the client service and self-hosted server components are fully installed and active. After any power outage, the computer will automatically power on, load Windows, start RustDesk in the background, and allow remote login unattended.
