

RustDesk Windows Service Installation Guide

Automated Service Elevation, Administrator UAC Prompt, and Verification

Installer Script Created:	INSTALL_AS_SERVICE.bat (Elevated One-Click Service Installer)
Windows Security Policy:	Registering a Windows System Service (Session 0) requires explicit Administrator UAC approval.
Action Dispatched:	Elevated execution triggered on your desktop screen

1. Completing the Administrator Approval

Because Windows restricts background service registration to elevated Administrator tokens, please confirm the following on your screen:

Step 1: Accept the Windows UAC Prompt

- If a **User Account Control (UAC)** popup appears on your desktop asking 'Do you want to allow this app to make changes to your device?', click **Yes**.

Step 2: If the prompt did not appear automatically

- Open File Explorer in this workspace directory:
- Double-click **INSTALL_AS_SERVICE.bat** (or right-click > **Run as administrator**).
- This will silently install the RustDesk Client service and launch the Server service setup.

Step 3: Direct RustDesk UI Alternative

- Open the **RustDesk Client** window from your taskbar / system tray.
- Click the **'Install'** button displayed prominently on the left panel > click **'Accept and Install'**.

2. How to Verify Active Services

Once installed, the services will appear in Windows Services manager (services.msc):

Service Name	Startup Type	Functional Behavior
RustDesk (Client Service)	Automatic	Runs in Session 0 before logon; handles incoming remote desktop connections at the Windows Lock screen.
RustDesk Server (hbbs/hbbr)	Automatic	Runs the ID and relay services continuously in the background on ports 21115-21117.
