

Node Hierarchy Manager

Authentication Lockout Analysis & Diagnostic Resolution Guide

Current Situation: The application has displayed the Supabase Auth modal ("*Welcome Back*" / *Sign In*) because there is no active authenticated session detected in your browser.

Why You Cannot Access Directly: The main application views (Node Tree, Tagging, Classification, Uploads) are gated behind Supabase Authentication. When sessions expire or browser storage resets, the app requires re-authentication to load data from PostgreSQL.

1. Root Cause Breakdown: Why Login Fails

Depending on which button or credential method you attempted on the screen, here is what happens under the hood:

Auth Method / Action	Technical Mechanism & Failure Cause
Email & Password Sign In	Calls <code>supabase.auth.signInWithPassword()</code> . Fails if the password was not set, if you previously registered via Magic Link / OAuth without a password, or if the email is typed incorrectly.
Sign in with Google	Calls <code>supabase.auth.signInWithOAuth({ provider: "google" })</code> . Fails if Google OAuth Client ID / Secret is not enabled in the Supabase Dashboard project settings.
Admin Approval Gate	After password verification, <code>Auth.tsx</code> queries <code>public.user_roles</code> . If a user is not marked as <code>approved = true</code> , the client automatically triggers sign-out and displays a pending approval warning.
Sign in with Magic Link	Calls <code>supabase.auth.signInWithOtp()</code> . Sends a one-time sign-in link to your email inbox. If spam filters delay delivery or SMTP limits trigger, the link may not arrive immediately.

2. Current User Accounts in Database

A direct query of the backend PostgreSQL `auth.users` and `public.user_roles` shows the active accounts registered on the system:

User Email	Role	Approved	Notes
seanbaker513@gmail.com	admin	TRUE	Primary Super Administrator account
seanbaker@tulkahai...	user	TRUE	Microsoft Workspace account
sean.baker@nttdata.com	user	TRUE	Enterprise account
pavelkostenko@tulkah...	user	TRUE	Active team account

3. Immediate Resolution & How to Regain Access

Option 1: Magic Link Sign In (No password required)

- On the login screen, type your admin email: **seanbaker513@gmail.com**
- Click the **"Sign in with Magic Link"** button.
- Open your email inbox, click the verification link, and the browser will log straight into the dashboard.

Option 2: Direct Database Password Reset (Instant Access)

Because we have direct administrative PostgreSQL access to the Supabase instance, we can instantly set a known password for **seanbaker513@gmail.com** (or any email). You can then log in immediately with that password.

Option 3: Register a New Account & Grant Instant Admin Role

Click **"Need an account? Sign Up"** at the bottom of the modal, create a new account, and we will execute a database script to immediately set `approved = true` and `role = "admin"`.
