

RustDesk Windows Service Installation Guide

Step 1 Execution: Enabling Pre-Login Remote Access for Power Outage Recovery

Action Requested:	Execute Step 1 (Install RustDesk Background Service)
UI Launched:	RustDesk window opened on desktop screen
Required User Action:	Click 'Install' inside the RustDesk window & accept Windows UAC prompt
Why UAC Prompt is Needed:	Windows security requires interactive admin approval to register System Services in Session 0.

1. Final Step to Complete Service Installation

The RustDesk application window has been brought to the foreground on your screen. Because registering a Windows System Service requires administrative elevation (UAC prompt), please perform the following quick clicks:

1. Locate the 'Install' button in RustDesk

- Look at the RustDesk window currently opened on your screen.
- On the left sidebar or the main card, you will see an 'Install' / 'Install RustDesk' button (or shield icon).

2. Click 'Install' and Accept the UAC Prompt

- Click the button and select standard installation options (default path: C:\Program Files\RustDesk).
- When Windows displays the **User Account Control (UAC)** popup asking 'Do you want to allow this app to make changes to your device?', click **Yes**.

3. Result

- RustDesk will be installed system-wide.
- The rustdesk Windows Service will be registered to start automatically at machine boot, allowing unattended login even at the Windows Lock screen.

2. Combined Power Outage Readiness

Setup Component	Status	Effect
Step 2 (BIOS / AC Power)	COMPLETED	PC will automatically power on and boot Windows when wall power returns.
Step 1 (RustDesk Service)	AWAITING UAC CLICK	Once 'Install' is confirmed in UI, RustDesk connects before login screen.
